

Suppose you could merge
freedom with security

Recall every word, any time

The FeaturePhone 175 SD is the perfect integrated combination of a digital Call Recorder and an advanced telephone for analogue lines or extensions. The FeaturePhone 175 SD has a proven track-record and is specifically designed for people who need to refer to their own calls on a regular basis or simply archive them for reasons of security, reference, training etc..

Recordings are stored on the recorder's internal Flash disk and subsequently on the SD-card, either automatically or manually. Recordings can be located and played back at the push of a button. Encryption of recordings is an option.

- Automatic or manual recording
- Internal telephone directory of 500 names and numbers
- Announcement with voice message before recording
- Answering machine functionality.
- Hands free function – possibility to use a headset directly
- Comprehensive database; quick search on all parameters
- Direct access to recorded calls and playback via internal speaker
- Use for dictations and meetings
- Recordings on the SD can be attached to an e-mail
- SD Access system (PC software) included

Also record your meetings or dictations

The FeaturePhone 175 SD has a built-in highly sensitive microphone allowing the user not only to record telephone calls but also use the FeaturePhone 175 SD as a meeting or desktop dictation recorder, if needed even with an optional desktop microphone.

Search and find recordings quickly

The FeaturePhone 175 SD allows you to directly access the recorded calls on the Flash disk or on the SD. Both the actual telephone and your PC can search the SD quickly using a range of criteria such as telephone number, date, time and duration of a call. Irrespective of the fact whether you use the FeaturePhone 175 SD or your PC, it will always be very easy for you to find the relevant call quickly.

- Search queries based on date, time, duration and telephone numbers
- Quickly find specific calls on the SD-card using the Quick SD Access software (for PC)
- Send recordings as an e-mail attachment
- User definable views to present the database.

Encryption

The FeaturePhone 175 SD is equipped with an IC Card reader. Using the CryptoCard, available as an option, the recordings can be encrypted. Without a corresponding CryptoCard and Pin code the encrypted recordings cannot be played back. This is not only a professional way to protect the calls, but is especially useful to protect the privacy of the people involved.
